Loss	50,845
Additional	-
Total	180,223

3.7 Segregation of Investment Portfolio:

Particulars	Amount ‘000’
Held for Trading	-
Held to Maturity	1,904,635
Available for sales	205,145
Total Investment	2,109,780

4 Summary of the finance's internal approach to assess the adequacy of its capital to support current and future activities, if applicable:

Shree Investment and Finance follows the Internal Capital Adequacy Assessment Process (ICAAP) and Risk Management Guideline while deciding on any business. It covers qualitative and quantitative information on risk capital adequacy assessment made by the management along with capital plan for the future business growth expected by the finance and meet the pillar I and pillar II risk to which the finance is exposed to.

The committees like Audit Committee, Risk Management Committee review the business and risk periodically and take necessary care of stress test result, return and capital in a sustainable manner. The finance has setup Assets Liability Management Committee to manage interest rate risk, liquidity risk, exchange risk, market risk etc. The finance perform gap analysis of its Assets and Liabilities to manage the liquidity risk. The finance consider the capital adequacy requirement pursuant to the provision set by Nepal Rastra Bank. The finance is well capitalized and able to maintain the required capital through internal generation and equally through capital market if needed.

5 Risk Management Function

a) Risk Management Committee

Members of the finance department's operation and risk departments are also part of the board-level Risk Management Committee. This is where the company's performance and overall risk management are thoroughly examined in order to evaluate the financial solvency. The relevant divisions receive the appropriate instructions, and recommendation are made to the Board where necessary.

b) Internal Audit

There has been appointment of independent internal audit team which is independent from management and reports to the Audit Committee.

c) Credit Risk Management

SIFC has its own Credit Policy Guideline (CPG) and loan product paper in order to look the general business activities. The company has clear vision on business and risk management where any credit proposal for approval is passed through CPG and risk analysis shall be done as per product portfolio before approval of credit appraisal

d) Operational Risk Management

Operations Risk that arises out of inefficient processes and people inside and outside the company is increasing these days. Operation risk, market risk, and other risks are discussed in the Risk Management Committee. Core Banking System (CBS) is another area of concern and vulnerable to threats from outside. Information and Technology Department in the company reviews and checks the security aspects in line with the IT Policy of the SIFC. SIFC has conducted an IS Audit of the CBS and suggestions given by the audit concerning safety and security standards are being put in place.

SIFC has a separate division to oversee operation risk including Compliance of KYC and AML. The department is headed by senior level staff with adequate access to the daily report, operational processes, and right to recommend the changes in the system and procedures. The head of operation department directly reports to the Chief Risk Officer.

Similarly, daily functions at operations are independently reported through separate reporting lines other than business generation and credit risk where independence of checking and control is complied with.

e) Liquidity Risk Management

Liquidity risk is the company's inability to meet its contractual and contingent financial obligations as they fall due, without incurring unacceptable losses. The obligations could be both 'On' and 'Off' balance sheet. By the inherent nature, companies are always vulnerable to liquidity and solvency problems that can arise from mismatches in the tenor of its assets and liabilities. The SIFC's primary liquidity risk management objective is to assess the funding requirement towards meeting its obligations and to ensure that adequate funds are available at appropriate times, both under normal and stressed conditions. Towards this the SIFC has its ALCO functioning as the main platform for its liquidity risk management. The ALCO reviews the liquidity risk management policies and procedures. Setting and reviewing liquidity targets, reviewing liquidity concentrations, assessing default probability of liquid assets, diversifying sources of funding and maturity of deposits, monitoring the liquidity impact of off-balance sheet transactions are some of the primary jobs of the ALCO towards achieving effective asset-liability management. The ALCO uses tools such as structural liquidity statements, interest rate risk monitoring tables, stress test reports, the liquidity profile of the company and that of the industry, liquidity ratio analysis, trend analysis, and forecasting in reviewing and managing the liquidity risk. Minutes of the ALCO meeting are discussed at the Risk Committee meetings to ensure senior oversight.
